

Instructor(s): *Mueller/Rinzler*PHYSICS DEPARTMENT  
Exam 2

November 4, 2008

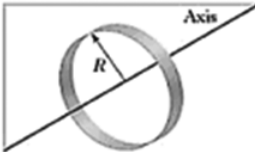

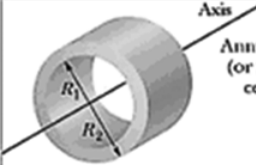

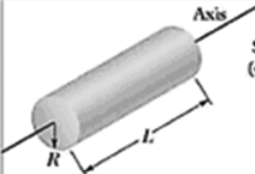

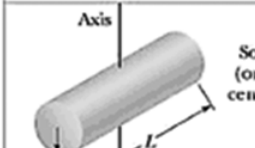

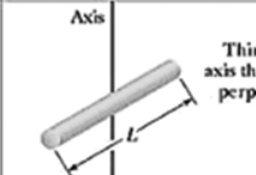

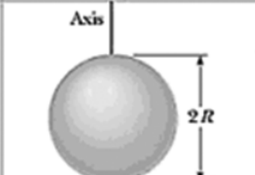

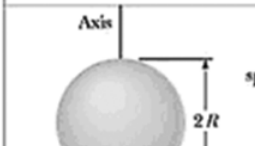

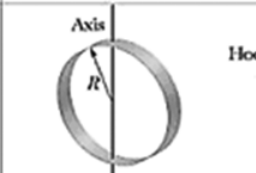

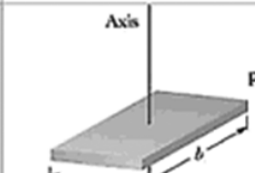

Name (print, last first): \_\_\_\_\_

Signature: \_\_\_\_\_

*On my honor, I have neither given nor received unauthorized aid on this examination.***YOUR TEST NUMBER IS THE 5-DIGIT NUMBER AT THE TOP OF EACH PAGE.**

- (1) **Code your test number on your answer sheet (use lines 76–80 on the answer sheet for the 5-digit number).** Code your name on your answer sheet. **DARKEN CIRCLES COMPLETELY.** Code your UFID number on your answer sheet.
- (2) Print your name on this sheet and sign it also.
- (3) Do all scratch work anywhere on this exam that you like. **Circle your answers on the test form.** At the end of the test, this exam printout is to be turned in. No credit will be given without both answer sheet and printout.
- (4) **Blacken the circle of your intended answer completely, using a #2 pencil or blue or black ink.** Do not make any stray marks or some answers may be counted as incorrect.
- (5) The answers are rounded off. Choose the closest to exact. There is no penalty for guessing.
- (6) **Hand in the answer sheet separately.**

Where needed use  $g = 9.80 \text{ m/s}^2$ 

 <p>Hoop about central axis</p> <p><math>I = MR^2</math> (a)</p>	 <p>Annular cylinder (or ring) about central axis</p> <p><math>I = \frac{1}{2}M(R_1^2 + R_2^2)</math> (b)</p>	 <p>Solid cylinder (or disk) about central axis</p> <p><math>I = \frac{1}{2}MR^2</math> (c)</p>
 <p>Solid cylinder (or disk) about central diameter</p> <p><math>I = \frac{1}{4}MR^2 + \frac{1}{12}ML^2</math> (d)</p>	 <p>Thin rod about axis through center perpendicular to length</p> <p><math>I = \frac{1}{12}ML^2</math> (e)</p>	 <p>Solid sphere about any diameter</p> <p><math>I = \frac{2}{3}MR^2</math> (f)</p>
 <p>Thin spherical shell about any diameter</p> <p><math>I = \frac{2}{3}MR^2</math> (g)</p>	 <p>Hoop about any diameter</p> <p><math>I = \frac{1}{2}MR^2</math> (h)</p>	 <p>Slab about perpendicular axis through center</p> <p><math>I = \frac{1}{12}M(a^2 + b^2)</math> (i)</p>

1. The weight of an object on the moon is one-sixth of its weight on Earth. The ratio of the kinetic energy of a body on Earth moving with speed  $V$  to that of the same body moving with speed  $V$  on the moon is:
- (1) 1:1                      (2) 6:1                      (3) 36:1                      (4) 1:6                      (5) 1:36
2. An object of mass 1 kg is whirled in a horizontal circle of radius 0.5 m at a constant speed of 2 m/s. The work done on the object during one revolution is:
- (1) 0 J                      (2) 1 J                      (3) 2 J                      (4) 4 J                      (5) 16 J
3. Camping equipment weighing 6,000 N is pulled across a frozen lake by means of a horizontal rope. The coefficient of kinetic friction is 0.05. How much work is done by the campers in pulling the equipment 1,000 m if its speed is increasing at the constant rate of 0.20 m/s<sup>2</sup>?
- (1)  $4.2 \times 10^5$  J              (2)  $-4.2 \times 10^5$  J              (3)  $1.8 \times 10^5$  J              (4)  $3.0 \times 10^5$  J              (5)  $1.2 \times 10^5$  J
4. At time  $t = 0$  a 2-kg particle has a velocity of  $(4\text{m/s})\hat{i} - (3\text{m/s})\hat{j}$ . At  $t = 3$  s its velocity is  $(2\text{m/s})\hat{i} + (3\text{m/s})\hat{j}$ . During this time the work done on it was:
- (1) -12 J                      (2) 4 J                      (3) -4 J                      (4) -40 J                      (5) 0 J
5. A cave rescue team lifts an injured spelunker directly upward and out of a sinkhole by means of a motor-driven cable. The lift is performed in three stages, each requiring a vertical distance of 10.0 m: (a) the initially stationary spelunker is accelerated to a speed of 6.0 m/s; (b) he is then lifted at the constant speed of 6.0 m/s; (c) finally he is decelerated to zero speed. How much *net* work is done on the 80.0 kg spelunker by the force lifting him during the overall rescue?
- (1) 23,520 J                      (2) 229,280 J                      (3) 6,400 J                      (4) 26,400 J                      (5) 0 J
6. A horizontal force of magnitude 35 N pushes a block of mass 4 kg across a floor where the coefficient of kinetic friction is 0.6. If the thermal energy of the block increases by 40 J when the block slides through a displacement of 5 m across the floor, what is the increase in the kinetic energy of the block?
- (1) 57.4 J                      (2) 135 J                      (3) 40 J                      (4) 17.4 J                      (5) 0 J
7. A stone of mass  $M$  rests on an elastic spring which is compressed a distance of 1 cm by the stone. The stone is pushed down an additional distance of 3 cm and then released. What is the maximum height reached by the stone relative to the release point?
- (1) 8 cm                      (2) 16 cm                      (3) 4 cm                      (4) 12 cm                      (5) need to know the spring constant  $k$
8. Near the surface of the Earth a block of mass  $M$  and initial velocity 9.8 m/s is sliding to the right along the (negative)  $x$ - axis as shown. The surface is frictionless for  $x < 0$  and has a kinetic coefficient of friction of 0.5 for  $x \geq 0$ . At what point  $x$  does the block come to a stop?

- (1)  $x = 9.8$  m                      (2)  $x = 4.9$  m                      (3)  $x = 19.6$  m                      (4)  $x = -4.9$  m                      (5)  $x = 0.0$  m

9. A particle moves along the x-axis under the influence of a conservative force. The potential energy is given by  $U(x) = (5.0 \text{ J/m})|x|$ , where  $x$  is in meters as shown in the figure (*i.e.*, if  $x \geq 0$ ,  $U(x) = (5.0 \text{ J/m})x$  and if  $x < 0$ ,  $U(x) = -(5.0 \text{ J/m})x$ ). If the total mechanical energy is 20 J, the limits of motion are:

- (1)  $-4.0 \text{ m}$ ;  $4.0 \text{ m}$       (2)  $-2.0 \text{ m}$ ;  $2.0 \text{ m}$       (3)  $0 \text{ m}$ ;  $4.0 \text{ m}$       (4)  $-5.0 \text{ m}$ ;  $5.0 \text{ m}$       (5)  $-4.0 \text{ m}$ ;  $0 \text{ m}$
10. A 4-kg particle moves along the x-axis under the influence of a conservative force. The potential energy is given by  $U(x) = (8.0 \text{ J/m}^3)x^3$ , where  $x$  is in meters. What is the magnitude of the acceleration of the particle when it is at  $x = 2 \text{ m}$ ? (*Hint*: remember that  $F_x = -dU/dx$ )

- (1)  $24 \text{ m/s}^2$       (2)  $12 \text{ m/s}^2$       (3)  $8 \text{ m/s}^2$       (4)  $64 \text{ m/s}^2$       (5)  $0 \text{ m/s}^2$

11. A small object of mass  $m$ , on the end of a light cord, is held horizontally at a distance  $R$  from a fixed support as shown. The object is then released. What is the tension force of the cord when the object is at the lowest point of its swing?

- (1)  $3mg$       (2)  $mg$       (3)  $2mg$       (4)  $mgR$       (5)  $4mg$
12. A child, riding on a large merry-go-round, travels a distance of 3,000 m in a circle of diameter 40 m. The total angle through which she revolves is:

- (1) 150 rad      (2) 50 rad      (3) 75 rad      (4) 314 rad      (5) 120 rad

13. A wheel initially has an angular velocity of  $18 \text{ rad/s}$  but it is slowing at a rate of  $2.0 \text{ rad/s}^2$ . By the time it stops it will have turned through:

- (1) 81 rad      (2) 160 rad      (3) 245 rad      (4) 330 rad      (5) 410 rad

14. A particle moves in a circular path of radius 0.10 m with a constant angular speed of 5 rev/s. The acceleration of the particle is:

- (1)  $10\pi^2 \text{ m/s}^2$       (2)  $0.1\pi^2 \text{ m/s}^2$       (3)  $0.5 \text{ m/s}^2$       (4)  $500\pi \text{ m/s}^2$       (5)  $1000\pi^2 \text{ m/s}^2$

15. A 16-kg block is attached to a cord that is wrapped around the rim of a flywheel of diameter 0.40 m and hangs vertically, as shown. The rotational inertia of the flywheel is  $0.50 \text{ kg}\cdot\text{m}^2$ . When the block is released and the cord unwinds, the acceleration of the block is:

- (1)  $0.56g$       (2)  $0.15g$       (3)  $0.84g$       (4)  $g$       (5)  $1.3g$
16. A 5.0 g bullet moving at speed  $v$  strikes a 500 g wooden block at rest on a frictionless surface. The bullet emerges, traveling in the same direction with its speed reduced to  $v/2$ . What is the resulting speed of the block?

- (1)  $v/20$       (2)  $v/10$       (3)  $v/50$       (4)  $v/2$       (5)  $v/50$

17. A solid brass ball of mass  $M$ , radius  $r$ , and rotational inertia  $I = 2Mr^2/5$  will roll smoothly along a loop-the-loop track when released from rest along the straight section. The circular loop has radius  $R$ , and the ball has radius  $r \ll R$ . What is  $h$  if the ball is on the verge of leaving the track when it reaches the top of the loop?

- (1)  $27R/10$                       (2)  $7R/5$                       (3)  $2R$                       (4)  $5R/2$                       (5) need to know  $M$

18. At  $t = 0$  a 2 kg particle is located at  $\vec{r} = (2m)\hat{i} + (4m)\hat{j}$ , and its velocity is  $\vec{v} = -(6m/s)\hat{i} + (3m/s)\hat{j}$ , and it is subject to the force  $\vec{F} = (6N)\hat{i} - (8N)\hat{j}$ . The magnitude of the angular momentum of the particle about the origin and the magnitude of the torque about the origin are, respectively:

- (1)  $60 \text{ kg}\cdot\text{m}^2/\text{s}$ ;  $40 \text{ N}\cdot\text{m}$  (2)  $30 \text{ kg}\cdot\text{m}^2/\text{s}$ ;  $40 \text{ N}\cdot\text{m}$  (3)  $60 \text{ kg}\cdot\text{m}^2/\text{s}$ ;  $24 \text{ N}\cdot\text{m}$  (4)  $30 \text{ kg}\cdot\text{m}^2/\text{s}$ ;  $24 \text{ N}\cdot\text{m}$  (5)  $24 \text{ kg}\cdot\text{m}^2/\text{s}$ ;  $16 \text{ N}\cdot\text{m}$

19. A solid cylinder having a mass of 2 kg can rotate about its central axis through point O (*i.e.*, z-axis as shown). Forces are applied as shown with  $F_1 = 3.0 \text{ N}$ ,  $F_2 = 1.0 \text{ N}$ ,  $F_3 = 8.0 \text{ N}$ , and  $F_4 = 10.0 \text{ N}$ . Also,  $r = 5.0 \text{ cm}$  and  $R = 20.0 \text{ cm}$ . Taking the clockwise direction to be negative, find the angular acceleration of the cylinder.

- (1)  $0 \text{ rad/s}^2$                       (2)  $20.0 \text{ rad/s}^2$                       (3)  $-20.0 \text{ rad/s}^2$                       (4)  $40.0 \text{ rad/s}^2$                       (5)  $-40.0 \text{ rad/s}^2$

20. The coefficient of static friction between a certain cylinder with radius  $R$  and a horizontal floor is 0.40. If the rotational inertia of the cylinder about its symmetry axis is given by  $I = MR^2/2$ , then the magnitude of the maximum acceleration the cylinder can have without sliding is:

- (1)  $0.8g$                       (2)  $0.1g$                       (3)  $0.2g$                       (4)  $0.4g$                       (5)  $g$
