

# ANTI-GRAVITY MIRROR

*Take off and fly in a mirror that makes half your body look whole!*

## Where You Should Stand:

Stand as shown in the figure, straddling the right edge of the mirror. A hand rail behind the mirror will help you keep your balance.

## Where Your Friends Should Stand:

Your friends can watch you fly if they stand facing you on the right side of the mirror.

## How to Fly!

To fly, lift your left leg off the ground and flap your left arm gently. If you experiment, you'll also find ways to hover in space, crawl up the edge of the mirror, and make extra arms and legs appear from nowhere.
