

Standard Model of Elementary Particles (PHZ6358): SYLLABUS

0. Introduction: Quarks, Leptons, Vector Bosons and Their Interactions (QFT Notes, chapter 16)
1. Feynman Diagrams and Rules.(QFT notes, Chapter 17; S, Sections 58, 61),
 - Propagators for spins 0, 1/2, 1
 - Vertices and rules for spinor and scalar QED
 - Ultraviolet divergences of Feynman diagrams: Degree of divergence.
2. Scattering Amplitudes in Quantum Field Theory (QFT Notes 18; S, 59))
 - Reduction Formalism
 - Examples
3. Quantum Electrodynamics: 1 Loop Corrections (QFT Notes Chapter 19,20)
 - Higher order Processes (S 62-65)
 - Ultraviolet divergences
 - Ward identities (S 67–68)
 - Mass and Charge Renormalization
 - Anomalous Magnetic Moment; Lamb shift
 - Positronium and Quarkonium
 - Infrared Divergences; Soft Photon Bremsstrahlung; Gauge Invariance (Notes, Chapter 20)
4. Non abelian Gauge Field Theories (Notes, Chapter 21; S, 69-72)
 - Review Path Integral for Gauge Theories
 - Some gauge groups
 - Gauge-fixing—Fadeev-Popov prescription
 - BRST symmetry
 - Renormalization
 - Quantum Field Theory of the Standard Model: Chiral Asymmetry
5. Systematics of Renormalization (Notes, Chapter 22)

- Renormalized Perturbation Theory
 - Two loop examples
 - Renormalization Group and Callan-Symanzik Equation
6. Renormalization and the Short Distance Properties of QCD (Notes, Chapter 23)
- Asymptotic Freedom
 - Renormalization Group
 - Background Field Methods
 - Operator Product Expansion
7. Spontaneous Breaking of Global Symmetry: Chiral Dynamics (chapter 24)
- Effective Action and Potential
 - Goldstone Bosons and Soft Pion Theorems
 - Adler-Weisberger and Other Sum Rules
 - Effective Chiral Lagrangians
8. Gauge Invariance and Anomalies (Notes 25)
- Gauge Invariance and Ultraviolet Divergences
 - Axial current anomalies
 - $\pi_0 \rightarrow 2\gamma$ decay
 - Consequences of Anomalies for the Standard Model
9. Spontaneous Breaking of Gauge Symmetry; The Higgs Mechanism (Notes, Chapter 26)
- Scalar Fields: Global Symmetries, Goldstone Bosons
 - Gauge Symmetries, the Abelian Case
 - Gauge Symmetries, the Non-abelian case
 - Perturbation theory with spontaneous symmetry breaking
10. Leptons and their Electro-weak Interactions (Notes, Chapter 27)
- Electron, QED processes
 - Muon

- Tau
- Neutrinos

University Policies:

Students are expected to know and comply with the University's policies regarding academic honesty and use of copyrighted materials. Cheating, plagiarism, or other violations of the Academic Honesty Guidelines will not be tolerated and will be pursued through the University's adjudication procedures.

Students are expected to provide professional and respectful feedback on the quality of instruction in this course by completing course evaluations online via GatorEvals. Guidance on how to give feedback in a professional and respectful manner is available at <https://gatorevals.aa.ufl.edu/students/>.

Students will be notified when the evaluation period opens, and can complete evaluations through the email they receive from GatorEvals, in their Canvas course menu under GatorEvals, or via

<https://ufl.bluera.com/ufl/>

Summaries of course evaluation results are available to students at

<https://gatorevals.aa.ufl.edu/public-results/>

Students requesting classroom accommodations must first register with the Disabilities Resources Program, located in the Dean of Students Office, P202 Peabody Hall. The Disabilities Resources Program will provide documentation to the student, who must then deliver this documentation to the instructor when requesting accommodations.
