

The Story Of Carolyn Beatrice Parker By: Scarlett Sweger

Carolyn Beatrice Parker was a very intelligent and amazing person. She was a teacher at Lincoln Highschool here in Gainesville, she was also a scientist. According to Carolyn Beatrice Parker Elementary A Story, "The only high school that would have allowed her to." It's very interesting to me how Carolyn got 2 Master degrees in Mathematics and Physics! Unfortunately though, she worked with polonium, which led her to contract cancer and died in 1966. She was about to get her Phd too! My mom has a Phd in Agricultural Sciences, so I can relate my mom to Carolyn Beatrice Parker because they were both hard workers!

What is physics?

Physics is one of the most important parts of science! People who study physics, called physicists, they study matter and the forces that act on it. Physicists also study many different forms of energy. According to Britannica Kids "The objects that physicists study range in size from the tiny building blocks of matter to huge groups of stars."
